Worksheet 4-9: Polynomial Applications to 2-D Measurements

The area of any rectangle can be found using the formula:

$$
A=l w
$$

where $\quad A$ is the area of the rectangle,
$l$ is the length of the rectangle, and
 $w$ is the width of the rectangle.

The area of any square can be found using the formula:

$$
A=s^{2} \text { or } s \times s
$$

where $\quad A$ is the area of the square, and $S$ is the side length of the square,

## Practice:

1. Write a simplified algebraic expression to represent the area of each figure.
(a)

$$
\begin{aligned}
& l=x+10, w=2 x \\
& A=l w \\
& A=(x+10)(2 x) \\
& A=2 x(x+10) \\
& A=(2 x)(x)+(2 x)(10) \\
& A=2 x^{2}+20 x
\end{aligned}
$$

Area of the figure can be represented by $4 x^{2}+20$.

$$
\begin{aligned}
& s=5 x \\
& A=s^{2} \\
& A=(5 x)^{2} \\
& A=(5 x)(5 x) \\
& A=25 x^{2}
\end{aligned}
$$

Area of the figure can be represented by $25 x^{2}$.
